The terrible snow storm on Tuesday was general throughout New England.

The Republican Congressional Convention convenes in Bridgeport, to-day.

A part of the Meriden Republican office has been rented for a drinking saloon.

The Stamford people seem to be terribly entangled in the snare of the Fowler - the clairvoyant.

Allan Cary died at her home in New York city on Sunday morning, after a long and painful illness, aged fifty years.

The French Constitutional Assembly met on Monday and organized. The prospects of peace are thought to be good.

Somebody in New Fairfield advertised in the Danbury News for a "cargo" of "good, smart girls" - *à la carte*, we suppose.

The New Haven Letter has changed from an evening to a morning paper, and has assumed the new title of the Elm City Press and Daily Letter.

The Tennessee has not been heard from since she left New York with the Domingo commissioners, and great fears are entertained regarding her fate.

Every citizen of Norwalk should read our description of the Alms House, in the local columns. If you do not believe the story go and see for yourself.

A lady is inventing a "legometer" to attach to men's pedals, so their wives can tell how far they travel when they "just stop down to the postoffice" in the evening.

Last Friday's New York Globe says: "Spring - sweet, joyous, hope-giving Spring - is even now at the threshold, and all give thanks for the inspiration of her influence."

A correspondent of the New York Herald from the seat of the Hudson River Railroad disaster, wrote to that paper that he "waded through ten feet of water" to reach one of the submerged cars. There is enterprise for you.

A late issue of the Cape Cod Gazette has the following errata: "In our report of Rev. W. H. H. Murray's sermon, where it reads, 'It is not difficult to be happy in hell,' it should read, 'It is not difficult to be happy in health.'"

Rev. S. W. Coggeshall, D. D., chaplain of the Wisconsin State Prison, has recently married a mysterious and fascinating convict, Susan Harrington, contrary to the wishes of her friends, who it appears did not like her to be married in *Cogy*.

The Confederate cotton loan, redeemable in gold by Jefferson Davis' government in 1883, it is announced, is still bought and sold on the London Stock Exchange. There are £2,445,700 of it in the London market, which cost the subscribers about 90 per cent of its nominal value.

The editor of the South Norwalk SENTINEL is proud to receive notice that when he dies he cannot take it with him - in fact, he would need it - Danbury News.

There is an error in the above conclusion, arising from Bro. Bailey's mistaken idea that he and we are both going to the same place.

A Michigan bridegroom recently failed to appear at the appointed time, but sent a note saying he did not feel well enough acquainted with her to marry. This was a very silly excuse, for by the time he had got "well enough acquainted" with her to marry, she, very likely, would have been so well acquainted with him that she would not marry him.

The New Haven papers say that a young lady of that city, while canvassing for recruits for a Sunday school, applied at the door of a bungalow, not knowing the character of the place, and upon entering, discovered there an interesting party of some half dozen or more of the most highly respected men of the city. Perhaps the "respected men" did not "know the character of the place" either.

The Fairfield County Democrat, a "red hot" Democratic newspaper, comes to us from Stamford, the initial number being published yesterday. It has contained some editorials, giving the radicals rats; a good selection of general reading; and a lively local department, although the latter, by its numerous references to lamp posts and sign posts, conveys the (we hope) false idea that the editor has a leaning towards such things.

A poor Chinaman, whose ancestors for two thousand years had carried baskets suspended from each end of a long yoke across the shoulders, was arraigned lately before a San Francisco justice for violation of the following ordinance: "No person shall carry a basket, or baskets, upon any sidewalk suspended from or attached to poles, across or upon the shoulders." "But," said his lawyer, "my client has not been carrying a sidewalk suspended from or attached to poles."

A Joint High Commission for the settlement between England and the United States of the Alabama and fishery difficulties has been appointed and will meet in Washington soon.

The Commission consists, on the part of England, of Messrs. Grey and Ripon, Sir Edward Thornton, Sir John A. McDonald, and Sir Stafford Northcote; and on our part of Hamilton Fish, Justice Samuel Nelson, Gen. Robert C. Schenck, Hon. E. R. Hoar, and Hon. George W. Williams.

The Rev. Morelle Fowler, with his wife and three children, who were victims of the late terrible disaster on the Hudson River Railroad, was graduate of the Berkshire Divinity School, at Middletown, of the class of '60. He was admitted to the priesthood in St. James' Church, New London, in April, 1861. Mrs. Fowler was the daughter of E. V. Stoddard, Esq., a prominent citizen of New London. Mr. Fowler was on his way to take charge of the church in Salt Lake City, and had with him his entire family, the oldest child being eight years of age and the youngest eighteen months.

The Standard Advocate, with its usual enterprise, has discovered that "work has been done" (the last week in January) "an in factored dose of cattle poison" through the town and stopping in Danbury, and then proceeding to the farm of Nathaniel Wood.

NORWALK INDUSTRIES - NO. II.

Norwalk Iron Works. This company was first organized Oct. 25th, 1866, for the purpose of manufacturing shafting, pulleys, gear crushing machines, &c. A plot of ground containing about 50,000 square feet, between Water street and the River, extending from the New York and New Haven Railroad track nearly three hundred feet north, was purchased, and the buildings which now occupy the premises commenced immediately. These consist of a machine shop, 147x43 feet, three stories high, with a one story addition, 51x37, in the rear; a foundry, 118x76 feet; a blacksmith shop 20x26; and an engine house 20x20. The water front is 385 feet long, along which is built a convenient dock, accessible to vessels drawing ten feet of water, and on which are erected buildings for the storage of coal, clay, sand, and other bulky supplies. These main buildings are all heated with steam, lighted with gas, and supplied with water throughout. The premises are so well protected against fires that an insurance seems almost unnecessary. Besides a large supply of buckets placed in convenient positions ready for use, and two large water tanks on the upper floor, a thirty horse power pump stands ready at any time to draw water from the river through a six inch pipe, and deluge the whole buildings, and in fact the whole neighborhood.

While these buildings were being erected, on Christmas of 1866, the company purchased the business of George Dwight, Jr., & Co., of Springfield, Mass., and increased their capital stock to \$600,000. With this purchase the original plan of the company changed, they coming into possession of the valuable franchises which have given the establishment its present character. In October, 1867, the buildings being completed, the business was removed from Springfield, where it had been conducted by the company since its purchase, and the Norwalk Iron Works became a fixed fact in our community.

The two most valuable patents of which the company are proprietors are the Earle Steam Pump, and their own Patent Balanced Piston Valve. The reader may better understand the processes of manufacture, we will give a brief description of these two machines. The engines of this company's manufacture are what are popularly called stationary, as distinguished from locomotive. They present to the eye a picture of compactness, simplicity, and strength. The peculiar feature which first attracts our attention is the fact that the cylinder, the cranks on which the cross-head travels, and which guides the piston rod, and the bearing that carries the crank end of the fly wheel shaft, are a single piece of cast iron; instead of being made in different parts and fastened together as in all other engines we have ever seen. This advantage alone, we should think, would recommend them above all others. The essential characteristic of the machine, however, is hidden within its cylinder - the balanced piston valve. This cannot be attempted to give a detailed description of this device, but will attempt to illustrate the principle which gives it its name. A common slide valve consists of a movable piece of iron, placed flatly on the inside of the steam valve, over the hole. As the steam chest is filled with compressed steam seeking vent, this valve is pressed with the full "weight" of the steam against the inside of the chest. Now the action of an engine, with every stroke the valve must be pushed from or pulled over the orifice, and of course, in so doing, all the friction caused by the pressure of steam against its flat side must be overcome. It is like pulling a sheet of paper from under a heavy pile of books. The Balanced Valve, of which this company own the patent, is an ingeniously contrived instrument, upon all sides of which the steam is admitted, and which is raised or lowered from a common slide valve as could easily be imagined, consisting simply of a common piston (or rather two - one for each port) working in a cylinder of its own, within the steam chest; "balanced" in fact in that fluid, and inhaling it, when open from all sides. When we remember that the pressure of steam is from fifteen to three hundred pounds to the square inch, the claim of the company that this valve saves twenty per cent of the power of the engine is saved by this device seems quite reasonable.

The Earle Steam Pump is, like the engine, a model of simplicity. It differs from all other pumps, in being supplied with the Earle Valve; in being made of but one piece, and so arranged as to receive the steam necessary to complete its throw from the main cylinder; in having no "dead points," at which some auxiliary motive power must be applied to start it; and in the simplicity with which it is constructed. It has received the highest testimonials from practical engineers, miners and manufacturers who have tested it, and the company have two gold medals from the Maryland Institute, one gold medal from the American Institute, a silver medal from the Massachusetts Mechanics Association, and a certificate of superiority over all other steam pumps at the Paris Exposition, obtained by it, in every case, over many competitors.

The company do not content themselves with even the superior advantages which these valuable features bring them over all their rivals, but spare no money or pains to excel also in quality of material, perfection of workmanship, and beauty of finish.

The directors have shown great skill and good judgment in surrounding themselves, as aids in their business at the heads of the various departments, practical mechanics of superior character. The chief of these, having the general management of the works under his hands, is the efficient Superintendent, Mr. John B. Waring, formerly the Superintendent of Cheney Brothers' Silk Manufactory, in Manchester, and at one time Lieutenant of Engineers in the Western Army. To his ingenuity, industry and energy all connected with the establishment will bear testimony.

The drawing room, a pleasant apartment on the third floor, is in charge of Mr. Frank M. Caille, a draftsman of superior skill. By his hand complete drawings of all the different machines manufactured by the company have been made; and separate draughts, with mechanical exactness, of each distinct part, of brass, steel, or cast or wrought iron. These have been carefully copied for the pattern maker, and the original drawing safely laid away. The constant changes and improvements, even of the most insignificant character, find ready response in the skill of his eye, and of many an experiment is in his careful hands.

The pattern room, which joins the drawing room, employs six men, of whom Mr. Nathan Dunbar, from the United States Army at Springfield, is foreman. The skill required to make patterns for castings is but little appreciated by those who have never investigated the matter. The wood used is generally the best and cleanest planed lumber, and is cut in a plain cast, and never allows moisture to be made for shrinking of the metal, and a deal of experience is required to estimate its property. But many castings are so complicated that patterns cannot be removed from the molds as all, and these have to be ingeniously arranged that after the mold has been formed they can be dissected and taken out without injury.

The sand apartment, on the third floor, is in charge of Mr. S. C. Wood. The sand which is used in the casting of metal is brought to the works, and is subjected to a series of tests, to determine its quality, and to see that it is fit for the purpose. The sand is then placed in a box, and is subjected to a series of tests, to determine its quality, and to see that it is fit for the purpose.

The sand apartment, on the third floor, is in charge of Mr. S. C. Wood. The sand which is used in the casting of metal is brought to the works, and is subjected to a series of tests, to determine its quality, and to see that it is fit for the purpose. The sand is then placed in a box, and is subjected to a series of tests, to determine its quality, and to see that it is fit for the purpose.

arranged conveniently for selection. The brass and iron foundry employs about thirty men, and is in charge of William H. Jones, for many years foreman in the Morgan Iron Works of New York City, where he acquired extensive experience in the use of the "Bristol," the "Providence," and other large foundry steamers. The company manufacture their own brass, and mix their own iron, the proportion of Scotch iron to American in their castings being one-sixth. They consume about one hundred and twenty-five pounds of brass and three tons of iron per day. They have facilities for casting a piece weighing eight tons; but the way in which they are passing on to the "Bristol," the "Providence," and other large foundry steamers. The company manufacture their own brass, and mix their own iron, the proportion of Scotch iron to American in their castings being one-sixth. They consume about one hundred and twenty-five pounds of brass and three tons of iron per day. They have facilities for casting a piece weighing eight tons; but the way in which they are passing on to the "Bristol," the "Providence," and other large foundry steamers. AFFAIRS ABOUT HOME.

New Advertisements.

Table with columns: FEBRUARY, 1871, RISES AND SETS, HIGH WATER. Rows for days of the week and moon phases.

Sunday Services.

SOUTH NORWALK. EPISCOPAL CHURCH—Corner West and High streets. Hours of service, 10 1/2 A. M. to 7 P. M. Rev. W. G. FESSENDEN, D. D. Rector.

CONGREGATIONAL CHURCH—Main Street, near Lighthouse. Hours of service, 10 1/2 A. M. to 7 P. M. Rev. J. M. DENNIS, Pastor.

M. E. CHURCH—Main Street, Hours of service, 10 1/2 A. M. to 7 P. M. Rev. DANIEL GOODHALL, Pastor.

S. PAUL'S REFORMED CHURCH—Church Square, Rev. W. C. MADOR, D. D. Rector. Hours of service, 10 1/2 A. M. to 7 P. M.

ST. MARY'S CHURCH (CATHOLIC)—Corner West and Chapel streets. Rev. FRANK SMITH, Pastor.

First Congregational Church—Church Square. Rev. SARGENT DAVENPORT, Pastor.

ST. JOHN'S CHURCH—Town Hall, 100 1/2 E. W. F. M. Sunday school, 12 M.

—Mr. Eli B. Bennett lost a very valuable cow a few days since.

—We are sorry to learn of the serious illness of Mr. Eben Hill.

—There is to be a meeting of the Common Council on Monday evening.

—The Phoenix Hose Company are to give an entertainment at Newhall Hall next Monday evening.

—The Gazette's "better half" (whoever she may be) makes a concession in favor of Frank Ferris' tongue in this week's paper.

—Ray, D. A. Goodsell delivered his lecture "Do Yourself in His Place," in Glen Cove on Monday evening to a large audience.

—Mr. Alexander Rowler has purchased the Clubmaster corner of 88 feet on Main street and 25 feet on Washington street, for \$22,000.

—The last Congregational Social of the season, and one of the most largely attended of most enjoyable, took place at the home of Capt. Henry R. Finch, last week Wednesday evening.

—We understand that the Fairfield County Fire Insurance Company and the Old Well club have decided to purchase the two lots in the city of Clark's Block, occupying sixty feet on Main street.

—We understand that Mayor Ely, who owns the property occupied by the Old Well Hotel and Old Well Stables, contemplates extensive improvements about that corner when the lease of the present occupants expires.

—Mr. Dudley P. Ely has bought the residence of Walter C. Quintard, opposite the post-office, and Mr. Quintard has purchased of Dr. Pardee the former residence of Mr. Davis Hatch, on the corner of Main and Elizabeth streets.

—A party of about a dozen gentlemen of our city and Centerville, visited Mr. Watts Comstock and his son, at their residence in New Canaan last Thursday evening, and were entertained in a princely manner by their host.

—The second annual ball and supper of the Carpenters and Joiners' Union, No. 80, will take place at Ely's Hall, to-morrow evening. The supper will be spread at the Old Well Hotel. It is probable to be seen that everything will be "up to the scratch."

—The electors of the borough of Norwalk held a meeting on Friday, at which the Wardens and Burgesses were empowered to survey and make a map of the borough. A tax of five mills was also laid to be collected by August 1st, and provisions made for a revision of the borough charter.

—Madame Rontz's Female Minstrel will appear at Norwalk Hall, to-morrow evening, with white faces. The public is assured the entertainment will be one that everybody can attend, having been endorsed by the respectable press and the public throughout the Eastern, Southern and Western States for the past season.

—Mr. Samuel Seymour lost a blacksmith's screw plate on the road between the Union School House and the residence of Giles Seymour, on Wednesday morning, while breaking the roads for the benefit of the public. He says he will suitably reward the finder. If he will return it either to him or to Mr. John McQuarrie.

—The furniture is being put into the new Union School House, preparatory to the opening of the school on Monday next. The committee have elected Miss Petteville Principal, and Misses Pennell and McClure Assistants; and have also appointed Misses Hotchkiss and Booth to positions in the other Union School, made vacant by this change.

—The ministers of the Methodist, Baptist, and Congregational Churches of the city and borough, met at Rev. Mr. Goodsell's study on Monday evening, and organized a Ministerial Association to meet twice a month for social culture, and interchange of views. We understand that invitations to join have been extended to the pastors of Wilton, Westport, New Canaan, Darien, and Stamford.

—A very pleasant wedding occurred at the residence of Capt. W. H. Ferris, yesterday afternoon, the same being that of his accomplished daughter, Tryphena, and Mr. W. H. Jarvis, of Bridgeport. A select party of personal friends assisted, by their presence in the ceremony, and were handsomely entertained by the bride's father. Mr. and Mrs. Jarvis left the city the same afternoon on their bridal tour.

—Miss Fannie Byxbee of this place took the leading character in the opera of "Blanche," performed for the first time at the new Bridgeport Opera House on Wednesday evening of last week. None who are acquainted with her musical accomplishments will be surprised to hear that her declamation of the character was unusually perfect, and that the press and public of this city, while they criticized many of the other singers with much severity, are unanimous and unstinted in their praises of her.

—Mrs. Emily Pardee is confined to her room with a severe attack of sore throat, and it is feared she will not be able to fulfill her engagements to lecture for several weeks, if at all again this season. Her

last appearance in public was at Winsted, on Wednesday evening of last week, when she exhibited, according to the Herald, "rare personal attractions, combined with a sweet refined taste and cultivated talents, a sweet, clear voice, and a noble womanly nature, which must immediately place her in the front rank among the lyceum lecturers of the present day." She had several appointments, extending into the spring, among them a repetition of her lecture in Winsted on next Sabbath evening.

—Mr. William H. Jones, the foreman of the Norwalk Works Foundry, celebrated the evening of February 7th, the anniversary of his birthday, in his usual manner, by giving a fine supper to the workmen under his charge and a few outside guests. The persons invited convened at his house and spent the early part of the evening in social merriment. At about ten o'clock supper was announced, and the visitors sat down to a sumptuous table, handsomely spread, and loaded with all the luxuries of the season. After the repast was finished Mr. Jones referred to the high esteem which they entertained towards him, on account of his close attention to their needs, his forbearance and his self-reliance in times of peril, proffered him, in their behalf, with a magnificent English pattern lever watch, valued at over one hundred dollars. Mr. Jones replied in a very appropriate manner, expressing his appreciation of their good will. The remainder of the evening was filled with speeches from several of his guests, among which the one of Mr. Botticher was particularly well received. The gathering broke up about half past eleven, the guests giving three cheers to Mr. Jones as they left the house.

—The new hall of Sparkling Water Temple of Honor and Temperance, No. 6, was dedicated with appropriate ceremonies on Friday evening. The hall is situated on the second floor of Clark's Block, and is 42 by 33 feet. A beautiful Brussels carpet covers the floor, the walls are decorated with pictures and symbols of the order, and the room is tastefully furnished. This organization was started about two years ago, and has already grown to be a moral power in the community. It is in no sense a rival of any other temperance order; but differs from the others chiefly in admitting only male members, and in making its pledges binding only during membership. There is, however, a social branch, which is composed of members of the Temple and such ladies as desire to join them. This, although it is under the patronage of the Temple of Honor, is distinct in its organization and privileges. The dedicatory services were under the management of D. M. S. Welles, G. W. T. of the State, and Mary A. Simpson, S. G. P. T. and were very interesting in their details. Addresses were afterwards made by Rev. Mr. Simmons, Mr. C. F. Hallock, and Mr. David R. Selleck. The exercises were enlivened with vocal music by members of the organization under the leadership of Prof. Merriam. Quite a large delegation of Good Templars were present in their regalia, also a full representation of the Social Order of the Temple of Honor.

—Chief Officer Tuttle succeeded in re-arresting the notorious thief John Washburn in Jersey City last Thursday. Mr. Tuttle's acquaintance with him dates back to last May, when he and ten or twelve other ruffians took possession of the hotel at Roton Point, and were arrested, after they had become intoxicated with liquor, and brought up to our city. The whole party were tried, and sent to jail in Bridgeport for thirty days. Before the sentence expired, Washburn, and a companion named Connelly, broke jail. Chief of Police Marsh, of Bridgeport, telegraphed the fact to Mr. Tuttle, and about a week afterward the latter officer got on the track of them, and at last discovered them near "Rings End" (between Darien and Stamford), after a smart chase across fields and through barnyards, they were "tired" in a hen roost and captured. On reaching Bridgeport they were again incarcerated in the jail, to await their trial for this last offence; but, about the 1st of August, before the day of trial had arrived, Washburn again escaped. This time he joined some companions in Huntington, and succeeded, the next night, in stealing a horse, with which he fled to Derby and sold for one hundred and fifty dollars. The Huntington authorities soon got track of the robbers, and succeeded in capturing the whole band, except Washburn, who escaped, although he was shot in the arm by his pursuers. Nothing more was heard of him until last Thursday. On the morning of that day Officer Tuttle read in a New York paper the report of a conversation between two vagabonds who had spent a night in the Jersey City station-house, and who were arrested on suspicion of being connected with some murder. The brief description of the fellows convinced Mr. Tuttle that one of them was none other than his old acquaintance. He proceeded to Jersey City the same afternoon and identified him, Washburn saying, as he entered, that he was looking for some Connecticut chap. Mr. Tuttle returned and got the proper papers for his arrest, and arrived in our city with him on Friday evening. He was kept under special surveillance until Saturday, when he was conveyed to Huntington, where he was examined and bound over to the superior Court for trial. He is a light, active young man, about five feet ten inches in height, and a little over thirty years of age; is quite intelligent and voluble, and possesses, apparently, a common education. Officer Tuttle is to be commended for his alertness and sagacity in the whole affair.

—A more appropriate occasion for visiting the Norwalk Almshouse than the driving, blinding storm of Tuesday provided could not easily have been chosen—a day in which nature seemed to have withdrawn her protection from her offspring, and left God's poor at the mercy of their fellow men. Away on the extreme eastern border of the town, on the old road to Sargantuck, a road, apparently but little travelled now on a ridge of land that overlooks the Sound, is the "town farm," a comfortable, indeed a pleasant country homestead, and contains now the old-fashioned farmhouse, in which Mr. Scofield, the keeper, and his family reside. In an enclosure near by, surrounded by a formidable board fence, is the cluster of buildings which constitute the town Poor House. We pass through a heavy gate, and survey the premises. We are within a yard the size and surrounded of a common country estate, immediately before us stands the only building to which the dignified name of "house" could possibly be attached, a structure six by twenty feet on the outside, and two stories high. Behind this stately edifice stands (or rather sits) a more modest single story building, covering twelve by eighteen feet of ground. Several out buildings of various sizes and shapes lean effeminately against the fence. The group by no means a cheerful one, although the "beautiful snow," shimmering from the house-tops, glittering through the air, and rustling along the ground, covers the whole of purity over us an unsightly and unwholesome thing. We enter the door of the most pretentious building, and find ourselves within a house containing four rooms and a hall on each floor. We open the left hand door, and enter the recessed room—the most aristocratic apartment on the premises, a room about eight by ten feet square, with no furniture but beds and a stove. This

room is a type of all the apartments, except that it is one of the most cheerful and comfortable. A motley group of mendicants, of both sexes and of every age, swarm about us. They are remarkably fine specimens of the class to whom "the world owes a living;" and their habitation, filled with filth, and rags, and foul odors, and without a chair, or stool, or bench on which to sit, forms an equally true picture of treatment which the world gives its creditors. Opposite this room, on the right hand side of the hall, we open a door and attempt to enter; but the pestiferous fumes that meet us drive us quickly out. We are led to another barred aperture, through which we look in upon the two demented inmates. One of them, a young girl of no mean pretensions to natural beauty, sits in the corner, her dishevelled hair falling upon her shoulders, and her shapely limbs wrapped in unsightly rags, and greets us with a pleasant smile and a lady-like "How do you do." In another corner, wrapped in an old blanket, with immovable face and downcast eyes, morose, silent, stolid, sits her idiotic companion, forsaken, desolate and destitute, "only a pauper, whom nobody owns." It was a sad and sickening sight; sadder than our reader will care to see, and more sickening than we desire to paint. Up stairs we went, meeting at every step new surprises of wretchedness, followed in all our wanderings by a curious crowd, and starting from their cheerful, drowsy misery a half a score of lame, lank, loathsome Lazarus. The very turn of the same vile smells met us, with the monotony of misery. The other building has three apartments on the ground floor, and an open loft or garret. Here the female element was most conspicuous, although the privacy of the sex is nowhere protected; indeed there seem to be no safeguards possible, in the present arrangement of the apartments, against indiscriminate cohabitation. A single fire seems to warm the whole house, and is probably sufficient for that purpose. In an out-house, which looked something like a dog kennel, were shown where the "worst cases" are kept to sleep. We had seen enough. There are thirty inmates of this cheerful place; each one, if the room was equally divided, having a spot four feet by six in which to live, move, and have a being. About twenty of these are old residents, and enjoy a kind of squalid sovereignty, the highest right attainable in such an uncharitable institution. Nine are children (of whom one was born in the institution), six being boys and three girls. Most of these are sent to school by the town authorities. Three are imbeciles; Georgiana Reed, Harry Hoyt, and Mary Kelly. Such of the inmates as cannot walk to the kitchen, which is outside of the yard, have their meals brought to them; and all are furnished, as all knowledge, with a plenty of wholesome food.

- List of Patents Issued from the United States Patent Office for the week ending Feb. 7, 1871, for the State of Connecticut, furnished us from the office of John E. Earle, Collector of Patents. James Ives, of Mt. Carmel, mode of fastening hub lamp. H. R. Towne, of Stamford, two patents for locks. E. D. Castelow, of Meriden, flower stand. J. W. Dayton, of Waterbury, suspender. Chas. Parker, of Meriden, assignee, gate latch. Wm. A. Ives, of New Haven, two patents, auger and bit brace. J. R. Mackay, of Meriden, faucet. H. D. Smith & Co., of Plainville, assignees, die for forging, trimming and shaping spring clips for carriages. R. W. Norton, of New Haven, clock pendulum rod. G. M. Pratt, of Middletown, shuttle for sewing machine. Sargent & Co., of New Haven, assignee, spring bolt. M. E. Mead, of Darien, ventilator designs. Albert D. Judd, of New Haven, match safe. Foster, Merriam & Co., of West Meriden, assignees, drawer pull. D. W. Shures, of Hamden, barrow.

The following extract from the old records of New York city, which has lately been put in print, exhibits the fraternal feeling which at that time existed between the Knickerbockers and their Yankee neighbors.

Extract from the Will of Lucia Morris. [Recorded in the Surrogate's office, New York, Liber 23, Page 428, Nov. 19, 1760.] "It is my wish that my son Gouverneur shall have the best education that can be furnished him in England or America; but my express will and direction are, that under no circumstances shall he be sent to the College of Connecticut for that purpose, lest in his youth he should imbibe that low craft and cunning so incident to the people of that country, and which are so interwoven in their constitution that they cannot conceal it from the world, though many of them, under the sanction of a high religion, have attempted to impose themselves upon the world as honest men."

List of Letters Remaining in the Post Office at South Norwalk, February 14, 1871.
